

Medium & High Voltage Products

Skultuna Induflex develops and manufactures a complete range of flexible laminates/materials for medium and high voltage cable products. By combining different materials and thicknesses, we make customized laminates that perform well in our customers' unique solutions. The function of these flexible foil laminates can potentially include protection from electromagnetic (EMI) and electrostatic (RFI) interference, water barrier, flexibility and insulation. We are also able to make copper copolymer coated tapes, semi-conductive laminates and metallized cable paper laminates.

Our extensive experience in manufacturing technical laminates, in small to large volumes, ensures access to a consistent supply of laminates at the agreed, uniform quality. We can provide additional coating systems including lubrication, corrosion- and fire resistant coatings and specialize in heat sealable solutions, both with coatings and films. On request, laminates can also be needle- and hole perforated. With experience in slitting and spooling, we offer both narrow width pads and traverse wound spools. Laminates can be supplied in pads, spools, master rolls, sheets or other special formats.

General Technical Data

Metal foils	Thicknesses (µm)
Al	50, 100
Cu	100, 150, 200
Pb	36, 125, 250
Stainless steel	38
Polymer films	Thicknesses (µm)
PE	50
Copolymer	30, 50
Semi conductive PE	50
Supporting materials	Grammage (g/m ²)
Transformer kraft papers	86, 100

Other thicknesses and raw materials (e.g. nonwoven, PEN, PI etc) are also available.

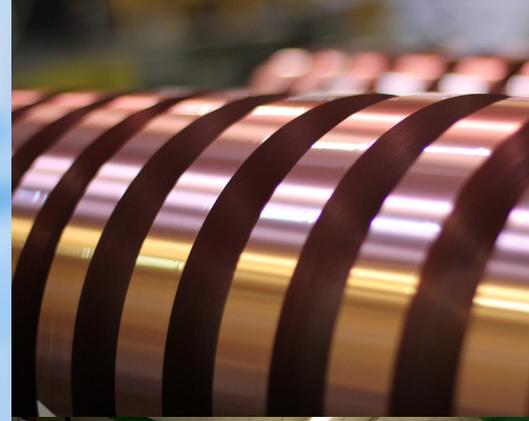

Skultuna Induflex laminates metal foils in thicknesses from 6–200 µm and polymer films from 4–250 µm from roll-to-roll. Paper, cardboard and other thin materials on reels can also be used. In our standard product range, laminates can consist of 2–3 layers but 4 and 5 layers are also possible. We can add functional coatings/primers from 1 µm up to approximately 20 µm.

Adhesives

Materials are put together with one or two component high performance adhesives with optimum chemical and/or temperature resistance according to specific requirements. The adhesives are tailor made for each material and requirement and can also be colored as well as containing different additives and flame retardants.

Customer specific laminates

We develop and manufacture laminates according to your specific requests. Laminates can be supplied in a variety of combinations using any material as long as it comes on reels. We can find cost effective material solutions that fulfill your requirements, give good durability and mechanical properties in the intended environments.

Our core business is flexible laminate perfection

Skultuna Induflex innovates and delivers technical flexible laminate applications for products that makes people's everyday life easier. We do it by utilizing our expertise and tech competence from our three locations in Sweden, Belgium and China.

By combining and laminating materials such as paper, paperboard, plastic films and metal foils, we create an almost infinite number of flexible laminates. This makes it possible to solve problems in new ways, whether it's for shielding, barrier, conduction, reflection, appearance or other purposes.
